TABLE OF CONTENTS

PREFACE

xvii

CHAPTER ONE

Introducing Linux	1
Understanding Operating Systems	1
Defining an Operating System	1
Operating System Functions	2
Commonly Used Operating Systems	3
The Arrival of Linux	4
The Spirit of Linux	5
The Linux Software License	6
How Linux Is Developed	8
Linux Distributions	9
Version Numbering	11
The Motivation of Free Software Developers	12
The Strengths of Linux	14
Stability	14
Security	14
Speed	14
A Multitasking, Multiuser, Multiprocessing System	15
Flexibility	16
Applications	17
Learning More About Linux	17
Reading Linux Documentation	17
The Linux Documentation Project	18
Linux Command Information	19
Documentation Included with Software Packages	19
Linux on the Internet	19
Chapter Summary	20
Key Terms	21
Review Questions	22
Hands-on Projects	25
Case Projects	26

CHAPTER TWO

Planning Your System	27
Preparing to Install Linux	27
Understanding Computer Hardware	28
Supported Linux Hardware	32
Understanding Networking	32
Creating a Shared System	35
Graphical Systems	38
Creating a System Inventory	40
Finding the Manuals	41
Reviewing BIOS Settings	42
Studying Microsoft Windows	44
Asking Networking Questions	48
Preparing Your Hard Disk	49
Booting the System	50
Hard Disk Geometry	51
Using Big Disks	52
Swap Partitions	53
Preparing a Shared Hard Disk	53
Chapter Summary	57
Key Terms	57
Review Questions	59
Hands-on Projects	63
Case Projects	64

CHAPTER THREE

Installing Linux	65
Understanding Installation Issues	65
Linux Distributions	66
Red Hat Linux	67
The Installation Process	67
Installation Source Options	68
Starting the Installation	70
The Installation Process	72
Answering Initial Questions	73
Preparing Hard Disk Partitions	74
Choosing What to Install	81
User Accounts	84
Configuring the Graphical System	84
Configuring the Boot Loader	85

Starting Linux	86
Logging In	86
Starting the Graphical System	87
Creating the First User Account	88
Testing Network Connections	89
Troubleshooting a New Installation	90
The System Won't Boot	90
The Graphical Interface Doesn't Work	91
Some Hardware Isn't Available	91
Chapter Summary	92
Key Terms	92
Review Questions	93
Hands-on Projects	96
Case Projects	103
CHAPTER FOUR	
Running a Linux System	105
Working with Linux Files and Directories	105
Working at a Command Line	107
Linux File Commands	108
Linux Files on a Graphical Desktop	112
File Properties	114
Managing Software Packages	117
Function Libraries	119
Adding and Removing Software Packages	120
Using tar Archive Files	124
The Linux Kernel	125
Learning About Your Kernel	126
Kernel Modules	126
Modifying the Linux Kernel	130
The Initialization Process	132
Booting the Kernel	132
Initializing System Services	132
Runlevels	134
Shutting Down Linux	138
Configuring LILO	139
Chapter Summary	141
Key Terms	141
Review Questions	144
Hands-on Projects	147
Case Projects	150

CHAPTER FIVE

Using Graphical Systems with Linux	151
Learning About the X Window System	151
A Brief History of X	152
Concepts Related to X	153
Running the X Window System	159
Installing and Configuring X	159
Launching X	174
X Resources	176
Using Desktop Interfaces	178
The KDE Interface	178
The Gnome Desktop	181
Using a Graphical Login Screen	183
Chapter Summary	185
Key Terms	186
Review Questions	187
Hands-on Projects	190
Case Projects	192

CHAPTER SIX

The Shell and Text Files	193
Understanding the Shell	193
The Shell Prompt	195
The Functions of a Shell	196
Different Types of Shells	196
Entering Commands	198
The Shell Start-up Process	201
Customizing the Shell	203
Using Aliases	203
Symbolic Links	204
Environment Variables	206
Using Text Editors	209
A Variety of Editors	210
Using the vi Editor	211
Text Processing	215
Mark-up Languages	215
Controlling Fonts	218
Altering Text Files	222

Chapter Summary	223
Key Terms	223
Review Questions	225
Hands-on Projects	228
Case Projects	230
 CHAPTER SEVEN	
The Role of the System Administrator	233
Working as a System Administrator	233
Tasks of a System Administrator	235
Ethics and the System Administrator	236
Principles of Maintaining a Linux System	237
Linux Configuration Files	238
Understanding Files, Devices, and Processes	244
Multiple Users, Multiple Processes	246
Using Small, Efficient Utilities	246
Standard Input and Output	248
Using Basic System Administration Tools	250
Case Sensitivity in Linux	251
Filenames and File Extensions	251
Learning About Linux Commands	251
Using Regular Expressions	252
Using File and Directory Management Utilities	253
Deleting Files in Linux	254
Finding What You Need	255
Reviewing System Processes	258
Chapter Summary	259
Key Terms	259
Review Questions	260
Hands-on Projects	263
Case Projects	265
 CHAPTER EIGHT	
Basic Administration Tasks	267
Administering User Accounts	267
Types of User Accounts	268
Linux Groups	270
User and Group Files	271
Shadow Passwords	274

Creating New User Accounts	275
Changing User Passwords	279
Creating New Groups	282
Modifying User Accounts	282
Automating Home Directory Creation	283
Disabling User Accounts	285
Maintaining File Systems	287
Checking File System Status	289
Creating New File Systems	292
Mounting File Systems	294
Unmounting File Systems	296
Automating File System Mounting	296
Managing Swap Space	301
Simple Task Management	303
Job Control in the Shell	303
Using Virtual Consoles	305
Learning About Processes	306
Controlling Processes	308
Chapter Summary	309
Key Terms	310
Review Questions	312
Hands-on Projects	314
Case Projects	316

CHAPTER NINE

Hardware Redundancy and Fault Tolerance	319
Preparing for Emergencies	319
Creating a Disaster Plan	320
Preventing Downtime	321
Understanding High Availability	322
Creating Rescue Disks	323
Maintaining Software Masters	324
Managing the Computer's Power Supply	325
Connecting a UPS to a Linux System	326
Automating Linux Shutdown	328
Checking File System Integrity	335
Using the <code>fsck</code> Utility	338
Defragmenting a File System	340
Tuning a Linux File System	342

Understanding Redundant Disk Systems	343
Defining RAID Levels	344
Using Hardware-Based RAID	348
Using Software-Based RAID	349
Redundant Servers	350
Chapter Summary	353
Key Terms	353
Review Questions	356
Hands-on Projects	358
Case Projects	361
 CHAPTER TEN	
Managing System Resources	363
Accessing the <code>/proc</code> File System	363
Viewing Device Information	364
Viewing Process Information	366
Managing Processes	367
Process Priorities	370
Changing Priorities with <code>nice</code> and <code>renice</code>	371
Viewing Processor Usage with <code>top</code>	372
Using Graphical Process Management Tools	374
Using Other Graphical CPU Status Tools	377
Actively Monitoring the CPU Load	378
Managing Memory	379
Understanding Shared Libraries	380
Understanding Paged Memory	381
Tracking Overall Memory Usage	381
Tracking Per-Application Memory Usage	384
Viewing Virtual Memory Information	386
Locating System Bottlenecks	387
Identifying and Removing Bottlenecks	388
Using Benchmarks	389
Chapter Summary	389
Key Terms	390
Review Questions	391
Hands-on Projects	395
Case Projects	397

CHAPTER ELEVEN

System Logging	399
Introducing System Logs	399
The Purpose of Linux Log Files	400
The <code>messages</code> File	400
The <code>syslogd</code> and <code>klogd</code> Daemons	402
Viewing Boot Messages	403
Configuring the <code>messages</code> Log File	405
The Format of <code>syslog.conf</code>	405
The Facilities	406
The Priorities	408
The Actions	408
Setting up <code>syslog.conf</code>	409
Restarting the System Logging Daemons	412
Using the <code>logger</code> Utility	413
Maintaining Log Files	414
Checking Log Files for Problems	414
Rotating Log Files	416
Using the <code>logrotate</code> Utility	417
Chapter Summary	419
Key Terms	419
Review Questions	420
Hands-on Projects	424
Case Projects	426

CHAPTER TWELVE

Creating Scripts and Automated Procedures	427
Writing Shell Scripts	427
Interpreted and Compiled Programs	428
Programming Concepts	429
Components of a Shell Script	431
Creating a Simple Shell Script	434
Using Variables in Scripts	436
Understanding Tests	439
Using <code>if/then/else</code> Statements	440
Adding Loops to a Script	443
Other Scripting Methods	446

Automating Tasks with <code>at</code> and <code>crontab</code>	449
Automating One-Time Tasks	450
Automating Recurring Tasks	454
Managing <code>at</code> and <code>crontab</code>	458
Checking the Status of <code>at</code> and <code>crontab</code>	458
Controlling Access to <code>at</code> and <code>crontab</code>	461
Chapter Summary	461
Key Terms	462
Review Questions	465
Hands-on Projects	467
Case Projects	470
CHAPTER THIRTEEN	
The Printing System	473
Understanding Linux Printing	473
The Printing Architecture	474
The Role of Print Filters	477
Setting Up Printing	481
Deciding on Print Policies	482
Creating a <code>printcap</code> Entry	483
Using the <code>lpc</code> Utility	486
Using Graphical Tools to Set Up Printing	488
Printing a File	493
Managing Printing	496
Tracking Print Jobs	496
Creating Print Accounting Reports	497
Using Graphical Print Management Utilities	498
Remote Printing	500
Printing to Remote Linux and UNIX Systems	501
Printing to Non-Linux Systems	502
Chapter Summary	503
Key Terms	503
Review Questions	504
Hands-on Projects	507
Case Projects	509

CHAPTER FOURTEEN

Backing Up System Data	511
Back-up Strategies	511
Asking Initial Questions	512
Determining the Value of Data	513
Determining When to Back Up Data	514
A Linux Back-up Strategy	514
Hardware and Software Issues	519
Choosing Back-up Media	519
Comparing Devices	523
Verification, Permissions, and Other Issues	526
Using Back-up Utilities	527
Using <code>tar</code> and <code>cpio</code>	528
Other Back-up Utilities	530
Commercial Back-up Utilities	531
Chapter Summary	533
Key Terms	534
Review Questions	534
Hands-on Projects	537
Case Projects	539

APPENDIX A

Linux Certification Objectives	539
Linux and GNU Exam Objectives	539
Exam 1: Linux Installation and Configuration 3X01-101 Exam	540
Exam 2: Linux System Administration	542
Exam 3: Linux Networking	544
Exam 4: Linux Security, Ethics, and Privacy	546
Linux Professional Institute (LPI) Exam Objectives	548
Exam T1a: General Linux, Part 1	548
Exam T1b: General Linux, Part 2	549
Exam T2d: Red Hat Specific	552

Office Productivity Suites	578
Graphics Manipulation Tools	580
 GLOSSARY	 583
 INDEX	 601

Preface

The growth of Linux as an accepted and widely used operating system is the most important event to occur in the computer industry since the rise of the Internet. Many new Linux-focused companies are appearing, and most major hardware and software vendors are now moving rapidly to support Linux. Thus, it's essential that computer professionals become familiar with Linux technologies and applications. This book guides you through the process of learning Linux. It begins by introducing many basic concepts that may be unfamiliar to you and then explains the installation and use of a Linux-based computer from the point of view of a system administrator.

After you have become familiar with the tools and processes related to installing and administering a Linux system, you may need to demonstrate that knowledge by passing a Linux certification exam. After all, organizations are increasingly relying on such exams as a means of assessing technical skills. The world of Linux professional certification is still fairly new. As of this writing, two high-quality certification programs are available: the Linux Professional Institute (LPI) certification (see www.lpi.org) and the Sair & GNU Linux certification, called LCA, for Linux Certified Administrator (see www.linuxcertification.org).

LPI is sponsored by numerous major Linux vendors, including Caldera Systems, LinuxCare, and SuSE Linux. It is a nonprofit organization that operates with a board of directors who gather input from members of the Linux community to develop overall certification goals, testing objectives, and future plans. LPI has planned a three-level certification program. The first level, addressed by this book, consists of two tests aimed at basic Linux proficiency. One of these tests is a vendor-specific test and allows you to focus your training efforts on the Linux product that you expect to use most, such as Red Hat Linux, TurboLinux, Debian Linux, or others.

The Sair & GNU Linux certification effort was started by Tobin Maginnis, a professor at the University of Mississippi. With cooperation from leading free software enthusiasts, his organization created the LCA testing objectives and testing program. To obtain LCA certification, you must pass a series of four tests. The first two of these tests are addressed by this book. The third and fourth LCA exams are covered in *Guide to Linux Networking and Security*, (ISBN 0-619-00094-5), also published by Course Technology. The Sair & GNU Linux program is entirely vendor neutral, though it tends to focus somewhat on the Debian distribution.

Appendix A provides the most current information about the LPI and LCA certification objectives available at this writing. Both the LPI and LCA certification programs require you

to take and pass multiple tests. To prepare for the LPI tests, you should master the material presented in this book and also in the companion book *Guide to Linux Networking and Security*. To prepare for the first two LCA tests, use this book; to prepare for the third and fourth LCA tests, use the companion book.

The chapters in this book discuss the following topics:

Chapter 1 introduces the term OpenSource as it applies to the Linux operating system and describes the history of the Linux project.

Chapters 2 and 3 help you compile the hardware information you need in order to install Linux. They explain concepts related to installation and then walk you through the process of installing Linux on a computer.

Chapter 4 introduces many concepts related to how a Linux operating system functions. It explains how to work at the command line and how the system is initialized. It also introduces essential Linux commands.

Chapter 5 presents the Linux graphical systems in detail, explaining how to configure and troubleshoot the graphical environment.

Chapter 6 includes more information about using the shell, or command-line environment, to complete work in Linux.

Chapter 7 introduces Linux system administration. It describes the work of a system administrator, some concepts that Linux system administrators should know, and a few key system administration commands.

Chapter 8 focuses on three key areas of Linux system administration: managing user accounts, managing file systems, and managing processes (programs).

Chapter 9 describes how to safeguard information on a Linux-based computer against hardware failure. It explains concepts such as redundancy and introduces you to the Linux tools you can use to protect your data.

Chapter 10 explains how to manage the performance of a Linux-based computer using standard Linux command-line and graphical utilities. It explains how to expand the file system, manage memory, and work with benchmarks to track system performance.

Chapter 11 is dedicated to system logging. It teaches you why logs are important, where they are located, and how you can use the information they contain to manage a Linux system.

Chapter 12 explains how to write scripts in Linux and then use those scripts to schedule tasks for execution at any time.

Chapter 13 focuses on printing from a Linux system. You learn about the printing system in general, the utilities used to print files and manage printers, and how to print to network-accessible printers.

Chapter 14 explains how to back up data using standard Linux utilities and popular hardware devices such as optical drives and tape drives.

The three appendices at the end of this book serve as references for the Linux professional. Appendix A provides a list of the certification objectives for the LPI and LCA certification programs. Review these

objectives to test your knowledge and readiness before attempting to pass the certification exams. Be sure to check the Web sites mentioned earlier in the Preface to ensure you are using the most current certification objectives. Appendix B and Appendix C contain reference information about Linux command-line utilities and Linux graphical administration tools, respectively.

THE INTENDED AUDIENCE

This book is intended to serve the needs of readers who plan to work as Linux system administrators and who may also plan to take one or more certification tests as part of their professional preparation. The text and pedagogical features are designed to provide a truly interactive learning experience, preparing you for the challenges of the dynamic Linux industry. In addition to the information presented in the text, each chapter includes hands-on projects that take you through various tasks step by step. Each chapter also contains case projects that summarize a real-life situation in which you must use the knowledge gained in the chapter to address a specific problem.

FEATURES

To aid you in fully understanding the concepts related to Linux installation and system administration, this book includes the following features:

- ◆ **Chapter Objectives.** Each chapter in this book begins with a detailed list of the concepts or procedures to be mastered within that chapter. This list provides you with a quick reference to the contents of that chapter, as well as a useful study aid.
 - ◆ **Illustrations and Tables.** Numerous figures of utility screens and conceptual diagrams help you visualize Linux tools and concepts. In addition, many tables provide detailed utility information, summaries of options, or comparisons of both practical and theoretical information.
 - ◆ **Chapter Summaries.** Each chapter's text is followed by a summary of the concepts and tools introduced in the chapter. These summaries provide a helpful way to recap and revisit the ideas covered in each chapter.
 - ◆ **Key Terms.** All of the terms within the chapter that were introduced with boldfaced text are gathered together in the Key Terms list at the end of the chapter. This provides you with a method of checking your understanding of all the terms introduced.
 - ◆ **Review Questions.** End-of-chapter assessment begins with a set of review questions that reinforce the ideas introduced in each chapter. These questions are written to ensure that you have mastered the concepts presented.
 - ◆ **Hands-on Projects.** Although it is important to understand the concepts behind the Linux operating system, nothing can match the value of real-world experience. To this end, each chapter provides hands-on projects aimed at providing you with a step-by-step guide to implementing real-world solutions.
 - ◆ **Case Projects.** Located at the end of each chapter are several case-oriented questions. In answering these questions, you must describe how you would use the skills and knowledge gained in the chapter in real design and implementation scenarios.
-

TEXT AND GRAPHIC CONVENTIONS

Wherever appropriate, additional information and exercises have been added to this book to help you better understand what is being discussed in the chapter. Icons throughout the text alert you to additional materials. The icons used in this textbook are described below.

The Tip icon is used to present additional helpful material related to the subject being described. Many of the tips are drawn from the author's experience to help you better understand the concept or utility being described.

Each hands-on activity in this book is preceded by the Hands-On icon and a description of the exercise that follows.

The cautions are included to help you anticipate potential mistakes or problems so you can prevent them from happening.

RED HAT 6.0 CD

This book includes a copy of the Publisher's Edition of Red Hat Linux from Red Hat, Inc., which you may use in accordance with the license agreements accompanying the software. The Official Red Hat Linux, which you may purchase from Red Hat, includes the complete Official Red Hat Linux distribution, Red Hat's documentation, and may include technical support for Official Red Hat Linux. You also may purchase technical support from Red Hat. You may purchase Official Red Hat Linux and technical support from Red Hat Software through the company's web site (www.redhat.com) or its toll-free number 1-888-REDHAT1.

SYSTEM REQUIREMENTS

To install Red Hat Linux 6, your computer must meet the following minimum requirements:

- ◆ Intel 486 processor
- ◆ 16 MB of RAM
- ◆ 500 MB free hard disk space
- ◆ 3.5-inch floppy drive
- ◆ CD-ROM drive

To access a Linux host on a local area network to which your computer is connected, you need the following software and information:

- ◆ Telnet program
 - ◆ Either the IP address or the host and domain name of the Linux system
-

To access a Linux host via the Internet, you need the following software and information:

- ◆ Dial-up connection to an Internet Service Provider
- ◆ Telnet program
- ◆ Either the IP address or the host and domain name of the Linux system

INSTRUCTORS' MATERIALS

The following supplemental materials are available when this book is used in a classroom setting. All of the supplements available with this book are provided to the instructor on a single CD-ROM.

Electronic Instructor's Manual. The instructor's manual that accompanies this textbook includes:

- ◆ Additional instructional material to assist in class preparation, including suggestions for lecture topics, suggested lab activities, and sample syllabi.
- ◆ Solutions to all end-of-chapter materials, including the hands-on projects and case projects.

Course Test Manager 1.3. Accompanying this book is a powerful assessment tool known as the Course Test Manager. Designed by Course Technology, this cutting-edge, Windows-based testing software helps instructors design and administer tests and pretests. In addition to generating tests that can be printed and administered, this full-featured program has an online testing component that allows students to take tests at the computer and have their exams automatically graded.

PowerPoint Presentations. A complete set of Microsoft PowerPoint slides is available for each chapter. These can be used as a teaching aid for classroom presentation, as an online resource for chapter review, or as printed material for classroom distribution. Instructors are at liberty to add their own slides for additional topics introduced to the class.

DEDICATION

This book is dedicated to my favorite teacher, Quentin sT. Wells. Thanks, Dad.

ACKNOWLEDGMENTS

Preparing a book of this type requires the cooperation and coordination of many talented people. I felt privileged to work with them in creating this book together. Stephen Solomon at Course Technology started me on the road to this project and acted as a guide in the rapidly evolving world of Linux certification. Lisa Egan kept me on track during the many revisions and reviews required to prepare a book that we can all be proud of. She handled her job with humor and aplomb. A special thank-you is due to Ann Shaffer, the book's development editor, who showed me by her attentive and professional efforts that the craft of writing need not be diminished even when working in a fast-moving technical field. I trust that each reader will benefit from her attention as much as I did. Many other people at Course Technology contributed to the review, testing, and layout of this book, including Lisa Auer, the Production Editor, John Bosco, Manuscript Quality Assurance Manager, and the other members of the testing team. Other reviewers located around the country were willing to spend time reviewing the book before it was in a usable state. I thank all of these individuals for their patience and assistance:

Allan Collard	St. Clair County Community College
David Klann	Berbee Information Networks
Juliet Lauders	Rogue Community College
Guy Reams	Mount San Jacinto College
Philip Reid	Cleveland Community College
Vickee Stedham	St. Petersburg Junior College
Neal Stenlund	Piedmont Community College
Sudharshan Vazhkudai	University of Mississippi

Those who are working to make Linux certification a powerful force for professional training and acceptance of Linux in large organizations deserve the thanks of everyone who works professionally with Linux. Dan York and others on the board of the Linux Professional Institute, and Tobin Maginnis, who founded the Sair & GNU Linux certification effort (now owned by Wave Technologies), both deserve mention.

Finally, I thank my wife Anne, who remains ever supportive during the sometimes tedious and always time-consuming process of writing a book. It couldn't be done without her.
